

Summary

Front-End Developer with **7+ years of commercial experience** building complex React and TypeScript applications. Experienced in writing maintainable tests with Jest, React Testing Library, and Behavior-Driven Development (BDD) using Cucumber and Gherkin. I enjoy understanding business requirements, asking the right questions, and designing reliable solutions that account for edge cases. Currently building a personal project with Node.js and NestJS to broaden my expertise as a Full Stack Developer while exploring how AI can improve engineering productivity without compromising software quality.

Skills

React	TypeScript	JavaScript	Claude Code / Cursor	Redux	HTML

Experience

Inoxoft
Front-end Developer

Lviv, Ukraine

08/2024-07/2026

- Developed complex enterprise features using **React**, **TypeScript**, **TanStack Table**, and **TanStack Virtual**, translating business requirements into scalable technical solutions for financial reporting applications.
- Enhanced and extended a virtualized financial reporting grid, delivering features such as threaded comments with replies, search, hierarchical sorting, Color Scales for Conditional Formatting, and integration with **Power BI** Drill Down and Drill Through APIs.
- Developed a separate data-intensive application using **Handsontable**, implementing advanced editable data grids for enterprise users.
- Collaborated directly with clients through **twice-weekly demos**, technical discussions, and solution design, presenting implementation options using **Architecture Decision Records (ADRs)** and contributing to architectural decisions.
- Improved engineering practices by introducing AI-assisted workflows for technical investigations, documentation, and implementation while creating **ADRs**, **Root Cause Analyses (RCAs)**, and technical documentation to support long-term project maintainability.
- Proposed writing unit tests alongside feature development for a greenfield project, resulting in **100% unit test coverage** by project completion.

Tech Stack: React, TypeScript, TanStack Table, TanStack Virtual, Handsontable, Power BI Custom Visuals API, Jest, React Testing Library, Claude Code, Cursor, ADR, RCA, JavaScript (ES6), HTML5, CSS3

AB Soft
Front-end Developer

Odessa, Ukraine

11/2020-07/2023

- Developed and maintained a React and TypeScript application for account confirmation workflows, integrating with **GraphQL** through **Apollo Client**.

- Led the migration of acceptance tests from QA-managed test cases to **Behavior-Driven Development (BDD)** using **Cucumber** and **Gherkin**, taking full ownership of this initiative for nearly a year.
- Wrote comprehensive unit and integration tests with **Jest**, helping improve application reliability and maintainability.
- Contributed to the migration of the front end from a legacy **Symfony** application to a standalone React application while continuing to support legacy functionality using **Twig** and **jQuery**.
- Participated in sprint planning and estimation, collaborating closely with developers and QA engineers to plan and deliver features every two weeks.

Tech Stack: React, TypeScript, GraphQL, Apollo Client, React Context, Jest, Cucumber, Gherkin, Symfony, Twig, jQuery, JavaScript (ES6), HTML5, CSS3, SCSS

1000Geeks	Odessa, Ukraine
Front-end Developer	05/2019-11/2020
Trainee React Developer	05/2019-06/2019

- Developed a social networking platform using **React**, **TypeScript**, **Redux**, and **REST APIs**, implementing features such as user profiles and enhancing functionality for posts, comments, likes, and messaging.
- Worked as the sole Front-End developer on an administrative panel, collaborating closely with a Back-End developer to deliver new features.
- Took the initiative to introduce **unit testing** to the project by proposing its adoption to the Project Manager and building the first test suite with **Jest**, improving code quality and maintainability.
- Enhanced a legacy **Backbone.js** application by implementing client-requested features for a hospitality administration system.
- Built responsive user interfaces for web pages, email templates, and PDF documents.

Tech Stack: React, TypeScript, Redux, REST API, Backbone.js, Jest, JavaScript (ES6), HTML5, CSS3, SCSS (Sass)

Citrus	Odessa, Ukraine
HTML/CSS Coder	02/2018-04/2019

- Developed responsive, pixel-perfect layouts for B2B web applications, product pages, promotional landing pages, and email templates.
- Collaborated closely with designers to accurately translate UI/UX mockups into production-ready interfaces.
- Ensured cross-browser compatibility and responsive behavior across desktop and mobile devices.

Tech Stack: HTML5, CSS3, SCSS (Sass), BEM, JavaScript (ES6), Git

Projects

Progress Path (Personal Project)

Personal productivity application built to expand backend expertise with NestJS, PostgreSQL, TypeORM, JWT, and Docker. Implemented authentication, password reset, Role-Based Access Control (RBAC), and database design.
